An everyday guide

high blood pressure

YOU'RE IN CONTROL

Diet and lifestyle changes are powerful tools in helping lower high blood pressure. For some people, it may even bring their blood pressure back to normal or reduce the amount of medication they need.

What is high blood pressure?

The role of our heart is to pump blood throughout our body. "Blood pressure" is the force that circulating blood creates within the walls of our blood vessels. It is similar to the pressure created by water inside a garden hose when the water is on.

High blood pressure, also known as *hypertension*, is a medical condition that exists when the force (or pressure) of the blood against the blood vessel walls is too strong.

High blood pressure is dangerous because it makes the heart work too hard. Over time, the extra force can cause arteries to become scarred and less elastic. While these changes will happen gradually with

age, they occur more quickly in people with elevated blood pressure. Uncontrolled high blood pressure can lead to stroke, heart attack, congestive heart failure and kidney failure. In fact, high blood pressure is the number one risk factor for stroke and a major risk factor for heart disease.

Know your numbers

According to Hypertension Canada, one in five Canadian adults has high blood pressure, and 20% are unaware of it because it has no symptoms. Knowing and monitoring your blood pressure, particularly if it's high, is important for staying healthy and preventing complications.

One fifth of Canadian adults have high blood pressure.

What causes high blood pressure?

Many factors can contribute to the development of high blood

pressure. Often it isn't just one thing, but a combination. Some of the factors are out of our control.

Risk of high blood pressure increases as we get older and is most common among people over 40 years old. Smoking, genetics and certain conditions such as obesity, diabetes or kidney disease may also increase risk.

Take control

Taking any of the steps below can help improve your blood pressure. The more you do, the healthier your blood pressure will be.

- ▶ If you smoke, get help to quit
- ▶ Reduce sodium (salt) intake
- ▶ Limit alcohol to 1-2 standard drinks a day, or less
- ▶ Be active at least 2.5 hours a week, with each exercise period lasting 10 minutes or more
- ▶ Eat a healthy diet
- ▶ Manage your weight wisely by adopting a healthy lifestyle

DASH to healthy eating

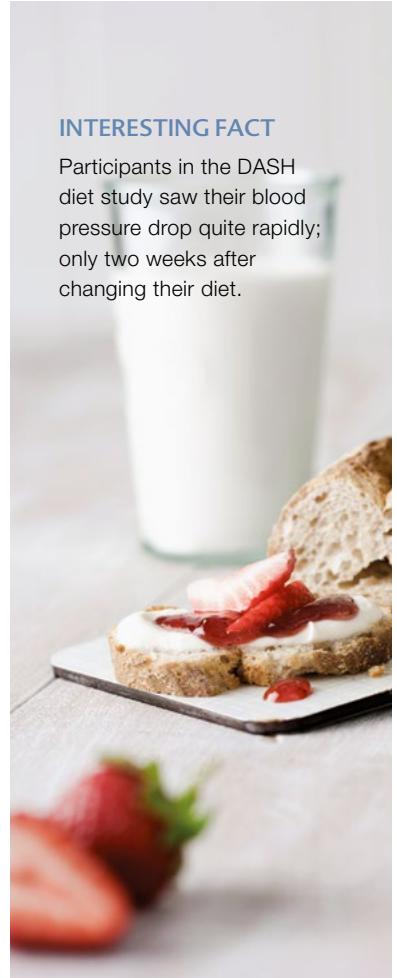

Good news! A pattern of healthy eating, known as the DASH diet, has been shown to help effectively lower elevated blood pressure, as well as reduce the risk of developing high blood pressure.

Based on extensive research conducted by a group of renowned health institutions, DASH (Dietary Approaches to Stop Hypertension) involves no complicated instructions or special foods.¹

The DASH diet study has shown that a healthy pattern of eating that includes 3 servings of milk products a day plus 8 to 10 servings of fruit and vegetables reduces blood pressure twice as much as a diet high only in vegetables and fruit.

INTERESTING FACT

Participants in the DASH diet study saw their blood pressure drop quite rapidly; only two weeks after changing their diet.

how does the DASH diet work?

MILK PRODUCTS

DASH recommends 3 servings of milk products every day.

Each example is one serving:

Milk
1 cup (250 mL)

Yogurt
¾ cup (175 g)

Cheese
1 ½ oz (50 g)

Shredded cheese
½ cup (125 mL)

VEGETABLES AND FRUIT

DASH recommends 8-10 servings of vegetables and fruit every day.

Each example is one serving:

Dried fruit
¼ cup (60 mL)

Leafy vegetables, raw
1 cup (250 mL)

1 medium fruit

Vegetables
½ cup (125 mL)

Key foods associated with healthy blood pressure

Studies have revealed that vegetables, fruit and milk products, especially milk and yogurt, help maintain a healthy blood pressure. These nutritious foods provide calcium, magnesium and potassium, a combination of nutrients that have long been associated with a reduced risk of high blood pressure.² However, it's probably the synergy between these crucial nutrients and other, as yet unidentified, compounds in vegetables, fruit and milk products that makes these foods so effective.

Milk products also contain bioactive peptides, a special type of protein that seems to have a beneficial effect on blood pressure. They are similar to the active ingredients found in much stronger doses in blood-pressure-lowering medications.

Are supplements as effective as food?

Individual nutrients consumed in the form of supplements may not have the same blood pressure lowering effect as foods. You need to eat the foods to get the full benefits. Why? Food has many other components beyond the nutrients mentioned previously. These provide further benefits that work in ways not yet fully understood.

The vast majority of Canadians don't eat enough vegetables, fruit and milk products every day to meet the recommendations of the DASH Diet.³

the everyday healthy eating

DASH tracker

Committing yourself to making changes in your diet and lifestyle will have lifelong benefits to your health and well-being.

Set realistic expectations

The way you eat now didn't happen overnight, so don't try to make a lot of major changes to your diet (or your behaviours) all at once. People who make realistic changes over a longer period are much more likely to succeed. And when you slip up, don't feel bad—just get back on track. Changing your eating habits can be challenging at the beginning, but will soon become second nature if you persist.

Using the tracker

Familiarize yourself with the tracker and fill it out every day. Make taking your blood pressure a priority and be sure to record it. Try to do it when you are feeling relaxed.

Food-wise, using the tracker keeps you aware of what you are actually consuming. It allows you to set a goal, analyze your behaviour and motivate change. In other words, using it will help you succeed!

First steps

The key to making healthy changes is to know your starting point. For the first couple of weeks, use the tracker to get a handle on your current eating habits. Chances are you really don't know how many servings of vegetables, fruit and milk products you are eating now.

With an accurate idea of your present eating pattern, you'll be in a good position to think about what needs to change.

Tack the Healthy Eating DASH Tracker to your fridge and fill it out once a day. Doing it before dinner gives you a chance to top up on missing foods at dinner or with an evening snack.

Make your goals SMART!

Thinking “**SMART**” is a useful way to help you frame your goals for changes that will last.

SMART stands for:

- ▶ **S**pecific
- ▶ **M**easurable
- ▶ **A**ction-oriented
- ▶ **R**ealistic
- ▶ **T**ime-framed

Examples of typical goals:

- ▶ I'm going to drink more milk
- ▶ I'm going to eat more leafy green vegetables
- ▶ I'm going to eat more fruits

Examples of SMART goals:

- ▶ Every day this week, I'm going to drink a glass of milk with at least one meal
- ▶ I'm going to eat a leafy green vegetable with dinner at least 3 times this week
- ▶ This week, I'm going to include one serving of dried, frozen or fresh fruit in my afternoon snack

Writing your goals down and tracking your progress can help you focus and stay motivated. Make sure to celebrate your successes and don't be too hard on yourself when you fall short. It's part of change. Just keep at it.

*With the DASH approach,
healthy eating is within everyone's reach.*

importance of a healthy lifestyle

Healthy lifestyle and your weight

While being overweight can be a factor in higher blood pressure, managing your weight may not be as easy as you'd like to.

A balanced diet and regular exercise can help maintain healthy blood pressure. Plus, adopting these changes could help you lose weight and reduce your blood pressure even more.

Read labels, learn lots

Nutrition Facts tables and ingredient lists provide lots of helpful information and are a great tool for anyone trying to improve the way they eat. Read them and compare what's in different foods before you buy.

For example: Check what the serving size is—you may be routinely eating more than you think. Buying foods that show higher

protein and/or fibre content will help keep you satisfied and sustain your energy levels longer. Also, use the sodium content listed on the label to compare similar foods and choose your best option.

Reduce your sodium intake

Reducing sodium consumption can be an important part of achieving and maintaining healthy blood pressure. Health Canada supports an established goal of 2,300 mg⁴ of sodium a day.* The current consumption of Canadians is about 2,760 mg.⁴

Remember that processed food such as canned and prepared foods, including those from restaurants and fast food establishments, are the major source of sodium in the Canadian diet, not the salt we add at the table.

Tips to help reduce your sodium intake:

At home:

- ▶ Prepare meals with fresh ingredients whenever possible
- ▶ Reduce salt in cooking by using herbs and spices instead
- ▶ For a flavour hit, squeeze fresh lemon juice on food instead of salting it
- ▶ Limit processed meats, pickled and smoked foods
- ▶ Read labels and choose lower sodium foods when available

In restaurants:

- ▶ Ask for your sauces and salad dressings on the side—they usually contain a lot of sodium
- ▶ Ask for lower sodium choices in restaurants

*For people with diagnosed high blood pressure, Hypertension Canada recommends no more than 2,000 mg of sodium per day. However, note that the Institute of Medicine cautions against an intake lower than 2,300 mg of sodium per day, especially for people with diabetes, kidney disease or cardiovascular disease.⁵

eating more of the good stuff

INTERESTING FACT

As part of a healthy diet, milk products can play a beneficial role in weight management and the prevention of obesity, which contribute to lower your risk of high blood pressure.

Feel good! Committing yourself to making positive changes in your diet will have lifelong benefits to your health and well-being.

EXPLORE THE VARIETY OF MILK PRODUCTS

To increase your consumption of milk products, eat yogurt for an afternoon snack or a cold glass of milk at night.

Top up

See every meal as an opportunity to meet your DASH milk product guidelines. Here are some ideas:

- ▶ Increase the milk on your morning cereal to a whole serving and make sure you finish it all
- ▶ Make dips and dressings with yogurt
- ▶ Make your soups milk-based
- ▶ Choose yogurt or milk-based puddings for dessert

Snack wise

Snacking on milk products can be an important pro-DASH eating strategy. Also milk, yogurt and cheese contain protein which makes them more satisfying than foods like chips or cookies, not to mention more nutritious.

DASH your drinks

Rethinking what you drink opens up lots of opportunities to add more DASH to your diet.

- ▶ Make your own yogurt drink: spoon a small container of vanilla yogurt into a glass, add a cup of milk, stir it up and voilà!
- ▶ Make your morning coffee a latte or have a milky chai and make your winter drink hot chocolate made with milk.
- ▶ Blending up a smoothie with yogurt, fruit and a little milk gives you servings of both DASH-recommended food groups and lots of satisfying taste.

GET COLOURFUL WITH VEGETABLES AND FRUIT

Start rethinking the focus of your meals. Instead of planning your plate around your choice of meat, spend equal time thinking about creating vegetable dishes you'll like.

- ▶ Enjoy more salads. Buy ready-washed greens to save on preparation. Munch on raw vegetables swiped in a yogurt-based dip.
- ▶ Layer your sandwiches with lots of dark green lettuce, onions, slices of tomatoes, and bell pepper.
- ▶ Make your own spaghetti and lasagna sauces with lots of vegetables or add them to sodium-reduced ready-to-serve versions.
- ▶ Commercial pizzas can be very high in salt. It's easy to make your own by piling sliced tomatoes, veggies and grated cheese on whole grain tortillas or English muffins, then baking them.

- ▶ Fresh, in a sauce, compote or dried, fruit is delicious and super convenient. Add berries to your cereal, snack on an apple at work. Have fresh fruit salad for dessert.
- ▶ Add lots of veggies to your soups.

Celebrate success

Don't forget to use the tracker. You'll find it an invaluable tool. Every time you meet a goal, no matter how modest, congratulate yourself and celebrate your success. Share the news with friends and family and reward yourself. Remember that you want your love of healthy choices to last a lifetime.

*With the
DASH approach,
healthy eating
is a goal within
everyone's
reach.*
